

Shetty's Desk

# BRAND KIT

The complete visual system for LinkedIn infographics

---

- Brand essence, voice & principles
- Full color, gradient & type specifications
- Isometric 2.5D illustration language
- Modular layout & LinkedIn formats
- AI image-generation system for Gemini, ChatGPT Image 2 & Claude Code

Detailed edition · visual DNA extracted & generalized for reuse

# Contents & How to Use

---

This brand book is the master reference. Pair it with brand-tokens.json (for Claude Code) and PROMPT-LIBRARY.txt (for image models). Everything here is designed so any infographic you make reads as one coherent brand.

## WHAT'S INSIDE

---

- 01 Brand essence, personality & voice
- L Logo — variants, colors & the two-layer rule
- 02 Color — primary blues (hex / RGB / CMYK)
- 03 Color — accents, semantics & meaning
- 04 Color — tints & neutrals
- 05 Signature gradients
- 06 Typography & the stat-callout move
- 07 Illustration & iconography rules
- 08 Motif & object library
- 09 Modular layout anatomy
- 10 LinkedIn output formats & safe areas
- 11 AI generation — master style block
- 12 Module prompt templates
- 13 Accent, text & ratio modifiers
- 14 Tool guide — Gemini / ChatGPT / Claude Code
- 15 Worked, ready-to-paste examples
- 16 Reference image library
- 17 Production workflow & QA checklist

## THE ONE RULE

---

Keep the master style block identical across everything and change only the subject. Generate each module on a white background, then assemble in the layout anatomy. That consistency is what turns individual posts into a recognizable brand.

# 01 · Brand Essence

An optimistic, credible, modern visual voice for professional content — airy, data-driven, and unmistakably consistent.

## ESSENCE

Shetty's Desk is built on clean white space, luminous blue gradients, and a vivid green that always signals the positive — progress, growth, the smart choice. Coral marks the old or costly way, used sparingly. Every visual is rendered as smooth isometric 2.5D vector art, never photographic. The result feels editorial and trustworthy: it looks like data you can believe, delivered with warmth.

## THE THREE SIGNATURES (NEVER COMPROMISE THESE)

- The signature green→blue eco-gradient, landing on whatever element represents the win.
- Flat isometric / 2.5D illustration with soft long shadows on a pure-white canvas.
- Mixed-weight stat callouts — a huge bold number beside small, light supporting words.

## PERSONALITY

Optimistic

Credible

Modern

Calm

Data-driven

Approachable

Tech-forward

Editorial

## VOICE & TONE (FOR CAPTIONS AND IN-GRAPHIC COPY)

- Lead with the insight, not the setup. Short sentences. One idea per line.
- Show the number, then say why it matters. Specific beats vague.
- Confident but never hype. No exclamation-mark energy — the data carries it.
- Human and generous: teach, don't lecture. Credit sources.

## Logo & Identity

The mark: a hand-textured chalk ring above a serif Shetty's wordmark with italic DESK. Warm and organic — the identity layer that counterpoints the clean isometric content system.

Primary — default: avatar, covers, watermarks on dark

Duotone — warm editorial contexts on dark

Mono white — dark or saturated surfaces (incl. Navy #1939A5)

Mono olive — light or cream surfaces; print

### LOGO COLORS

|                                                                                     |                   |         |                                          |
|-------------------------------------------------------------------------------------|-------------------|---------|------------------------------------------|
|  | <b>Terracotta</b> | #D97656 | Logo ring — primary mark color           |
|  | <b>Olive</b>      | #3C3828 | Wordmark alternative / mono variant      |
|  | <b>White</b>      | #FFFFFF | Wordmark on dark / mono variant          |
|  | <b>Black</b>      | #000000 | Identity canvas — the mark lives on dark |

### USAGE — THE TWO-LAYER RULE

- The logo palette (terracotta, olive, black) is the IDENTITY layer; the azure/eco-green system is the CONTENT layer. Never mix the two palettes inside one element.
- On infographics, the logo appears small: a mono variant as a footer watermark, or on a navy #1939A5 footer strip.
- Keep clear space of at least a quarter of the ring's width; never stretch, recolor, outline, add effects, or AI-regenerate the mark.

## 02 · Color — Primary Blues

Blue carries the entire system: surfaces, infrastructure, neutral subject matter. Five steps from light to dark give depth and hierarchy.

### Azure

#2798FB

RGB 39, 152, 251

CMYK 84 39 0 2

Primary brand blue — the hero color. Default for key shapes and accents.

### Sky

#50A9F7

RGB 80, 169, 247

CMYK 68 32 0 3

Lighter primary for highlights and the top of blue gradients.

### Royal

#247BE1

RGB 36, 123, 225

CMYK 84 45 0 12

Mid-tone for secondary fills and supporting shapes.

### Deep

#215DC3

RGB 33, 93, 195

CMYK 83 52 0 24

Headlines on light backgrounds, depth, and gradient mid-stops.

### Navy

#1939A5

RGB 25, 57, 165

CMYK 85 65 0 35

Darkest blue — strong contrast, footers, the foot of gradients.

### USAGE GUIDANCE

- Build shapes from light→dark within one object for the signature gradient depth.
- Use Azure for the single most important neutral element; reserve Navy for grounding/footers.
- Keep at least Deep (#215DC3) contrast for any blue text on white.

## 03 · Color — Accents & Semantics

Green and coral are meaning-bearing. They are never decorative — each one carries a fixed message.

|                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                         |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  <p><b>Eco Green</b><br/>#38E6A6<br/>RGB 56, 230, 166<br/>CMYK 76 0 28 10<br/>SIGNATURE accent. Positive, progress, growth, the recommended choice, the highlighted data point.</p> |  <p><b>Mint</b><br/>#8FF3CC<br/>RGB 143, 243, 204<br/>CMYK 41 0 16 5<br/>The light end of the signature eco-gradient. Pairs with Eco Green and Azure.</p> |  <p><b>Coral</b><br/>#E27199<br/>RGB 226, 113, 153<br/>CMYK 0 50 32 11<br/>Alert accent. Negative, warning, cost, friction, the old/inferior way. Use sparingly.</p> |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### COLOR SEMANTICS — THE RULES THAT CREATE MEANING

|                                                                                     |              |                                                                                    |
|-------------------------------------------------------------------------------------|--------------|------------------------------------------------------------------------------------|
|    | <b>Blue</b>  | The world, the system, infrastructure, and any neutral subject matter.             |
|    | <b>Green</b> | Positive / progress / growth / the smart or recommended choice / highlighted data. |
|  | <b>Coral</b> | Negative / warning / cost / friction / the old or inferior way. Sparing use only.  |

### DO & DON'T

- Do reserve green for exactly one 'win' element per graphic so it stays meaningful.
- Don't tint neutral objects green — it implies a value judgement that may not be intended.
- Don't overuse coral; one warning accent per graphic is plenty.

## 04 · Color — Tints & Neutrals

Light blue tints build backgrounds and depth; neutrals handle text and structure. White is always the canvas.

### LIGHT TINTS

|                                                                                                                                                                                              |                                                                                                                                                                                  |                                                                                                                                                                                           |                                                                                                                                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  <p><b>Tint 100</b><br/>#E2F0FB<br/>RGB 226, 240, 251<br/>CMYK 10 4 0 2<br/>Page &amp; card backgrounds</p> |  <p><b>Tint 200</b><br/>#C5E2F8<br/>RGB 197, 226, 248<br/>CMYK 21 9 0 3<br/>Fills, dividers</p> |  <p><b>Tint 300</b><br/>#A6D1F8<br/>RGB 166, 209, 248<br/>CMYK 33 16 0 3<br/>Depth, secondary fills</p> |  <p><b>Tint 400</b><br/>#7CBAF6<br/>RGB 124, 186, 246<br/>CMYK 50 24 0 4<br/>Stronger tint, shadow base</p> |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### NEUTRALS

|                                                                                                                                                                          |                                                                                                                                                                                 |                                                                                                                                                                               |                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
|  <p><b>Ink</b><br/>#15315C<br/>RGB 21, 49, 92<br/>CMYK 77 47 0 64<br/>Primary text</p> |  <p><b>Muted</b><br/>#5D7599<br/>RGB 93, 117, 153<br/>CMYK 39 24 0 40<br/>Body / captions</p> |  <p><b>Line</b><br/>#DCEAF8<br/>RGB 220, 234, 248<br/>CMYK 11 6 0 3<br/>Borders, rules</p> | <p><b>White</b><br/>#FFFFFF<br/>RGB 255, 255, 255<br/>CMYK 0 0 0 0<br/>Canvas — always the background</p> |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|

### ACCESSIBILITY NOTE

Use Ink (#15315C) for primary text and Muted (#5D7599) for secondary copy on white or Tint 100. Avoid placing Muted text on tints darker than Tint 200. For text on blue gradients, use white. Keep body type at 13px+ equivalent for on-feed legibility.

## 05 · Signature Gradients

Gradients are the heart of the look. The eco-gradient is the single most distinctive asset — it should appear in nearly every graphic.

### Blue gradient

`linear-gradient(135deg,#50A9F7 0%,#215DC3 55%,#1939A5 100%)`

#50A9F7

#215DC3

#1939A5

CSS: Surfaces, scenes, hero panels, UI

### Eco gradient ★

`linear-gradient(135deg,#8FF3CC 0%,#38E6A6 45%,#2798FB 100%)`

#8FF3CC

#38E6A6

#2798FB

CSS: The positive element in every graphic · highlights

### Tint wash

`linear-gradient(135deg,#E2F0FB,#A6D1F8)`

#E2F0FB

#A6D1F8

CSS: Section backgrounds, cards, soft panels

## GRADIENT PRINCIPLES

- Angle is consistently ~135° (top-left light → bottom-right dark). Keep it uniform.
- Within an illustrated object, fade light→dark to suggest a single soft light source.
- Never mix the eco-gradient onto a negative element — it breaks the color meaning.
- Avoid banding: use smooth multi-stop transitions, not hard two-color jumps on large fills.

## 06 · Typography

One geometric sans across the whole system. Poppins (free, Google Fonts) is the recommended face; Montserrat is an equal alternative.

### TYPE SCALE & ROLES

## SECTION HEADER

Header

Poppins 800 · UPPERCASE · +0.6px

## Item / Icon Label

Label

Poppins 700 · Title Case · 16–22px

Body copy, light and scannable

Body

Poppins 300–400 · 13–15px · Muted

CAPTION / SOURCE

Caption

Poppins 400 · UPPERCASE

### THE SIGNATURE STAT-CALLOUT MOVE

97%

OF THE TIME

big 800 number + light 300 caption

Pair an oversized 800-weight number with small 300-weight uppercase supporting words. Color the number Eco Green for a positive stat, Deep Blue for neutral, Coral for a negative. This single device does most of the brand's heavy lifting — use it as the focal point of stat modules.

### SETTING RULES

- Headers in UPPERCASE with slight positive tracking; body in sentence case.
- Keep line length short (the illustrations do the talking). 1–2 short sentences per block.
- Don't stretch, condense, or outline the type. One family, a few weights, consistent sizes.

## 07 · Illustration & Iconography

Flat-design isometric / 2.5D vector art on pure white. Swap the subject freely — the rendering style stays constant.

### CORE PRINCIPLES

- Isometric or front-flat vector built from rounded geometric shapes.
- Smooth blue gradient fills with soft, diffused long shadows (never harsh or black).
- One clear focal object per graphic, surrounded by generous negative space.
- Subtle glows and highlights suggest a single soft light source from the top-left.
- Friendly mini-figures and green rounded speech bubbles add a human touch.

#### ✓ DO

- + Pure white / very light blue background
- + Green gradient only on the positive element
- + Soft diffused shadows beneath objects
- + Rounded, friendly geometric forms
- + Airy, editorial composition

#### ✗ DON'T

- ✗ No photos or 3D-render realism
- ✗ No hard black outlines or sketch look
- ✗ No dark or busy backgrounds
- ✗ Never green for negative/costly things
- ✗ No clutter — keep it minimal

### REFERENCE, NOT LITERAL

The reference images in this kit (and the /reference-images folder) show the original subject matter. Attach them to an AI model for the rendering style — the gradients, the isometric geometry, the shadows — not the content. Always say 'match this art style, not the subject.'

## 08 · Motif & Object Library

A generalized vocabulary of objects. Mix and match to illustrate any professional topic in-style.

### DEVICES & DATA

Laptops & phones (iso)

Dashboards & screens

Bar & line charts

Growth arrows

Gauges & meters

### PEOPLE & PLACES

Mini human figures

People at work

Office & city blocks

Desks & workstations

Meeting scenes

### SYSTEM & FLOW

Connected nodes

Dashed paths & routes

Pipelines & links

Map pins / number badges

Layers & stacks

### CONCEPT ICONS

Lightbulbs (ideas)

Gears (process)

Targets (goals)

Shields (trust/security)

Globe (reach)

### BRAND DEVICES

Green speech bubbles

Eco-gradient highlight shapes

Checkmarks & crosses

Step/number markers

Soft long shadows

## 09 · Modular Layout Anatomy

Six repeatable modules snap together into any infographic. Consistent anatomy is what makes the feed read as one series.

### 1 Pin header

A number/topic badge + UPPERCASE title, underlined by a thin azure rule that fades to the right. Anchors every piece.

### 2 Intro + character

A short light-weight paragraph paired with a mini-figure and a green speech bubble holding a topic icon. Sets context, adds warmth.

### 3 Concept row

A row of 3–4 isometric icons, each with a bold label + one-line caption. The workhorse module for 'the N things' posts.

### 4 Hero scene

One large isometric illustration as the centerpiece, surrounded by white space. The visual anchor of the post.

### 5 Stat callout

An oversized mixed-weight number (green positive / coral negative) with a short caption. The shareable moment.

### 6 Sources footer

A centered, small blue 'Sources:' list. Citing data is part of the credibility — never skip it.

## ASSEMBLY

A typical carousel cover uses modules 1 + 4 + 5. An interior 'list' slide uses 1 + 3. A closing slide uses 5 + 6. Generate each module separately on white, then compose. Keep vertical rhythm generous — white space is part of the brand.

## 10 · LinkedIn Output Formats

Design once, export to the right canvas. Portrait 4:5 is the recommended default for maximum feed real estate.

|                                                                                                                                                                    |                                                                                                                                                                            |                                                                                                                                                                               |                                                                                                                                                                   |                                                                                                                                                                                    |

### SAFE AREAS & EXPORT

- Keep critical text/logo within ~6% margins; feed UI can crop edges and corners.
- For carousels, repeat the pin header on every slide so the series is recognizable when reshared.
- Export at 2× (e.g. 2160px wide) for crisp rendering, then let the platform downscale.
- Always keep the working background pure white so modules composite cleanly.

## 11 · AI Generation — Master Style Block

This paragraph is the DNA. Paste it into any image model so every generation lands on-brand. Keep it identical across a whole series.

### MASTER STYLE BLOCK

Flat-design isometric 2.5D vector infographic illustration in the "Shetty's Desk" brand style. Smooth blue gradients (azure #2798FB through royal #247BE1 to deep navy #1939A5), rounded geometric shapes, soft diffused long shadows, subtle glows, clean editorial composition on a pure white background. A signature green eco-gradient (mint #8FF3CC to emerald #38E6A6) marks the positive / progress / highlighted element; coral-pink #E27199 marks any negative element, used sparingly. Modern, optimistic, science-led, tech-forward. Crisp vector — NOT photorealistic, no 3D render, no hard black outlines, no sketch texture, no dark backgrounds.

### AVOID LIST (APPEND TO EVERY PROMPT)

Avoid: photorealism, 3D renders, hard black outlines, sketch/hand-drawn texture, dark or busy backgrounds, clutter, harsh or black drop shadows, muddy gradients, and using green for anything negative.

### HOW A FULL PROMPT IS ASSEMBLED

- MODULE template (what to draw) + MASTER STYLE BLOCK (how it looks)
- + ACCENT clause (where the green/coral goes) + TEXT clause (any in-image words)
- + ASPECT RATIO + AVOID list. Fill only the {subject}; never alter the style block.

## 12 · Module Prompt Templates

One template per layout module. Replace {subject} and keep the rest verbatim.

### HERO SCENE

A single large isometric hero scene showing {subject}. One clear focal object centered with generous white space around it.

### CONCEPT ICON ROW

A horizontal row of 3–4 matching isometric concept icons illustrating {subject}. Identical style, scale and lighting across all icons, evenly spaced on white, each suitable for a bold label beneath it.

### SINGLE ICON

A single isometric concept icon representing {subject}, centered, with a soft long shadow, isolated on pure white.

### STAT CALLOUT

A bold infographic stat callout about {subject}: an oversized number as the focal point with a small isometric supporting illustration beside it.

### COMPARISON

A side-by-side isometric comparison illustrating {subject}: two balanced halves, clean dividing space, matched perspective and scale.

### SYSTEM SCENE

A wide isometric system scene showing {subject}: interconnected objects, nodes or paths, small figures, lots of airy white space.

### SECTION HEADER BANNER

A clean banner-style header graphic for the topic "{subject}": a blue map-pin number badge and a thin azure underline rule, minimal, lots of white space, room for an uppercase title.

## 13 · Accent, Text & Ratio Modifiers

Snap-in clauses that tune meaning, in-image text, and canvas. Add one from each as needed.

### ACCENT CLAUSE (WHERE THE COLOR MEANING GOES)

- POSITIVE — Use the signature eco gradient (mint #8FF3CC to emerald #38E6A6 to azure) as the accent on the positive/highlighted element.
- NEGATIVE — Use coral-pink #E27199 sparingly to mark the negative / warning element.
- BOTH — Contrast a positive element (eco gradient) against a negative element (coral #E27199).
- NEUTRAL — Keep the palette to blues only; no green or coral accents.

### TEXT-IN-IMAGE CLAUSE

- NONE — Do not include any text or numbers in the image (cleanest, easiest to overlay later).
- LABEL — Include a short UPPERCASE label in a clean geometric sans-serif (Poppins/Montserrat style), deep blue #215DC3.
- STAT — Include one large bold stat number (eco-green if positive, deep blue if neutral) with a small light-weight uppercase caption beneath it.

### ASPECT RATIOS

- 4:5 portrait (1080×1350) — default LinkedIn post / carousel slide.
- 1:1 square (1080×1080) — compact single post.
- 16:9 — slides and banners.
- 9:16 — stories / tall narratives.
- Tip: generate text-free at first, add text in a second pass for maximum control.

## 14 · Tool Guide

The same DNA, fed the way each tool prefers. Use whichever fits the moment.

### Gemini — Nano Banana Pro

- Strongest at reference-image consistency — attach 1–2 kit images (or this PDF) and ask it to keep the flat isometric vector style.
- Handles long, descriptive prompts — keep the full master style block intact.
- Renders legible in-image text — fine to request labels and stat numbers.
- State the aspect ratio explicitly; iterate conversationally in the same chat.
- Ask for a row of matching icons in a single generation for a consistent set.

### ChatGPT — Image 2

- Lead with 'flat-design isometric vector infographic, pure white background' to lock the style early.
- Reuse the identical master style block across generations to keep a coherent series.
- Conversational refinement is its strength — start with the full prompt, then nudge.
- Excellent text rendering — well-suited to stat-callout modules.
- Request a pure-white or transparent background so assets drop into layouts cleanly.

### Claude Code — HTML/SVG

- Point it at brand-tokens.json + STYLE-GUIDE.md as the single source of truth.
- Have it inject colors, gradients and fonts into editable HTML or SVG modules.
- Compose modules per the layout anatomy; keep backgrounds white; export at 2x.
- Best route for pixel-precise, fully editable, repeatable output and batch series.
- Ask for an assembled 1080×1350 artboard, then tweak individual module values.

## 15 · Worked Examples

Three complete, ready-to-paste prompts. Copy, swap the subject, generate.

### A · GEMINI — CONCEPT ICON ROW

A horizontal row of 3–4 matching isometric concept icons illustrating the three pillars of a strong personal brand: consistency, authenticity, and value. Identical style, scale and lighting across all icons, evenly spaced on white, each suitable for a bold label beneath it.

[MASTER STYLE BLOCK] Use the signature eco gradient as the accent on the positive element. Include a short UPPERCASE label in deep blue #215DC3. Aspect ratio 4:5. Match the attached reference images' art style exactly. [AVOID LIST]

### B · CHATGPT IMAGE 2 — STAT CALLOUT

Create a flat-design isometric vector infographic illustration, pure white background. A bold infographic stat callout about how much of a workday is lost to context-switching: an oversized number as the focal point with a small isometric supporting illustration beside it.

[MASTER STYLE BLOCK] Use coral-pink #E27199 to mark the negative element. Include one large bold stat number with a small uppercase caption beneath it. Output as a 1:1 image. [AVOID LIST]

### C · CLAUDE CODE — BRIEF

Read brand-tokens.json. Build a 1080×1350 LinkedIn carousel cover as inline SVG using the Shetty's Desk tokens: a navy-to-azure blue gradient panel, an UPPERCASE Poppins 800 title, a thin azure rule that fades right, and one eco-gradient highlight shape. Pure white safe margins. Output an editable .svg I can tweak.

# 17 · Production Workflow & QA

From idea to posted carousel, and the checklist that keeps every asset on-brand.

## WORKFLOW

- 1 Pick the post type and map it to modules (e.g. cover = header + hero + stat).
- 2 Write the copy first — headline, labels, the one stat, the source.
- 3 Generate each module on white using the master style block; change only {subject}.
- 4 Assemble modules into the chosen LinkedIn format (Canva / Figma / Claude Code).
- 5 Add text in the brand type; place the stat callout as the focal point.
- 6 Add the sources footer. Export at 2x. Repeat the pin header across carousel slides.

## ON-BRAND QA CHECKLIST

- ☐ Pure white background?
- ☐ Exactly one eco-gradient 'win' element?
- ☐ Green never on anything negative?
- ☐ Isometric/flat vector — no photoreal or 3D?
- ☐ Soft shadows, no hard black edges?
- ☐ One geometric sans, correct weights?
- ☐ Stat callout is the focal point?
- ☐ Sources cited?
- ☐ Generous white space, no clutter?
- ☐ Pin header consistent across the series?
